EDUCATION

Honors Bachelor of Technology — Software Development

Seneca Polytechnic - Toronto, Ontario

- GPA: 4.0/4.0
- Recognized on the President's List for academic excellence, 6 consecutive terms.

EXPERIENCE

CGI Inc, Toronto Financial Unit, Toronto, ON

May 2024 – Aug 2024 | Jan 2025 – May 2025

Automation Tester — Co-op

- Created Java-based scripts to streamline the ingestion, validation, analysis, and comparison of SWIFT MT-MX messages, significantly reducing manual workloads
- Developed and maintained automated test scripts using Selenium and Robot Framework, improving testing efficiency.
- Conducted performance testing with LoadRunner to confirm system reliability under high data volumes.
- Collaborated closely with cross-functional teams to meet client requirements and deliver effective technical solutions.

CBV Collections Services LTD, Markham, ON

Jun 2022 – Present

Credit Analyst

- Handled outbound, inbound, and sales calls, ensuring quality experience for customers.
- Multi-tasked by notating accounts during calls and providing requested information to customers.
- Complied with project policies and guidelines.

SKILLS

Programming & Data Engineering: Python, Pandas, NumPy, SQL, Spark, TensorFlow, PyTorch.

Data Visualization & BI: PowerBI, Grafana, New Relic.

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions, ArgoCD).

Databases: PostgreSQL, MongoDB, MySQL, Redis.

Tools: Git, GitHub, GitLab, Jira, Automation Frameworks, Code Review.

Software Practices: Agile, Test Automation, Root Cause Analysis, Debugging.

PROJECTS

AWS DevOps Microservice ([Link](#))

Sep 2023 – Dec 2023

Node.js, AWS EC2, Docker, JavaScript, S3, DynamoDB, AWS ECS, CloudWatch, REST API

- Built and deployed a containerized microservice for fragment storage on AWS ECS with EC2 integration.
- Utilized AWS ECR to manage and store Docker images efficiently.
- Implemented DynamoDB for data management and S3 for efficient file storage.
- Set up CloudWatch monitoring and logging to track container performance and ensure system reliability.

Fuel Fraud Detection ([Link](#))

Jan 2024 – Dec 2024

JavaScript, Python, Next.js, Node.js, Azure Services, Power BI, Supabase, REST API

- Developed a MERN-stack app for fuel companies to manage accounts and fuel cards with real-time fraud alerts.
- Automated transaction analysis using machine learning models in Azure, achieving 85% fraud detection accuracy.
- Integrated Power BI dashboards for data visualization, enabling companies to track suspicious activity trends.
